

BAR CODE TRACKING OF INSTRUMENTS

With Sterilisation Tracking Module in our dental software and the sterilizer, we are able to track and document autoclave cycles and instrument packs.

The system tracks which instrument packs were used for each patient and which autoclave cycle it came from, details of autoclave used, sterilisation cycles, date/time, ID who operated the cycle.

We have the latest and best sterilisation methods; we take this very seriously and we have the highest standard of infection control.

Each of the machines is calibrated and maintained in impeccable condition. Each day the machine has to pass the required tests before sterilization can be done.
